

[3d] M\_AXLELOAD shall be set according to the following table:

| Value stored on-board | Transmitted value to X=1 RBC |
|-----------------------|------------------------------|
| A                     | 16 t                         |
| HS17                  | 17 t                         |
| B1                    | 18 t                         |
| B2                    | 18 t                         |
| C2                    | 20 t                         |
| C3                    | 20 t                         |
| C4                    | 20 t                         |
| D2                    | 22,5 t                       |
| D3                    | 22,5 t                       |
| D4                    | 22,5 t                       |
| D4xL                  | 22,5 t                       |
| E4                    | 25 t                         |
